International Refinery and Petrochemical Limited

About Atlantic

Atlantic International Refinery & Petrochemicals Limited (Atlantic) is an indigenous oil & gas, petrochemical and infrastructure business that is changing the narrative of Energy & Infrastructure as a service in Nigeria.

Atlantic is building the first integrated Energy Park in Brass, Bayelsa State comprising of a scalable and environmentally friendly Modular Refinery, Power Generation & Distribution Plant and World-Class Jetty Services.

This park which will be situated in the Brass Free Trade Zone, which will not only transform the economic activity in Brass, it will also act as a commercial hub for logistics in Niger Delta unlocking significant developmental impact in the Brass community and its environs.

Message from the Chairman/CEO

“At Atlantic International Refinery & Petrochemicals Limited, we are passionate about unlocking the value in Nigerian oil & gas assets that have historically been export-led without significant upside to the local economy. We are driven to correcting this misalignment and ensuring that our local economy benefits from our oil & gas assets without sacrificing our international positioning as a global oil & gas country. We believe that we will deliver on this goal by investing in our human resources and creating the infrastructure, systems and processes that will connect the upstream to the downstream oil & gas industry in Nigeria and West Africa.

We are also extremely driven to creating a lasting impact on the local communities that we operate through job creation, provision of quality healthcare, education and clean water. At the heart of our business model is improving the overall quality of living in these communities ensuring that our common wealth as a nation results in shared wealth for every citizen of our host communities and Nigeria.”

Dr. Akintoye Akindele; DBA, CFA

Atlantic Energy Park, Brass, Bayelsa

This first of its type energy infrastructure park in the Nigeria will include a modular refinery, modular port discharge operations via an SBM, and a power plant.

Our partnership with the Community

Improved power distribution

A Power Plant will be situated in the location of the refinery and this will improve power distribution within the host community and the Brass local government. The increased power distribution will lead to the following:

- The growing demand for stable and reliable power required in small and medium business sectors within the community will be met.
- Improved economic activities as a result of establishment of large factories, which require constant electricity to increase production of goods and services.
- Attracting international investors to the community as a result of increased economic activities.

Improvement in the state of infrastructure

Setting up the Atlantic refinery will improve the state of infrastructure in Brass local government and beyond and will lead to:

- Improved power generation infrastructure
- Improved power distribution networks and infrastructure
- Efficient and effective grid project design and operation

Our partnership with the Community

Creation of job opportunities

- The stimulated growth in production of goods services will lead to the creation of jobs in the Brass community.
- The job opportunities created will be for skilled and unskilled workers.
- In addition, this will enable the local transfer of expertise.

Putting Brass Local Government on the International Map

- The unique position of the Atlantic refinery along a waterfront presents an opportunity to export some of its finished products. As such, this will put the Brass community on the map as a trading hub for petroleum products.
- This we believe will promote the awareness of the Brass community globally as an investment destination

Our Co-investor & Partner - NCDMB

The Nigerian Content Development and Monitoring Board (NCDMB) was established in 2010 by the Nigerian Oil and Gas Industry Content Development (NOGICD) Act. NCDMB is vested with the mandate to deepen Nigerian content practice in the oil and gas industry and make procedures that will guide, monitor, coordinate and implement the provisions of the NOGICD Act signed into law on April 22, 2010.

Key functions of the Board include:

- To review, assess and approve Nigerian Content plans developed by operators.
- To set guidelines and minimum content levels for project related activities across the oil and gas value chain.
- To engage in targeted capacity building interventions that would deepen indigenous capabilities- Human Capital Development, Infrastructure & Facilities, Manufactured Materials & Local Supplier Development.
- To grow and manage the Nigerian Content Development Fund.
- To establish, maintain and operate the Joint Qualification System (NOGICJQS) in conjunction with industry stakeholders
- To monitor Nigerian Content Compliance by operators and service providers. This will be in terms of cumulative spending, employment creation and sources of local goods, service and materials utilized on projects and operations.
- To award Certificate of Authorization for projects that complies with Nigerian Content provisions
- To conduct studies, research, investigation, workshops and trainings aimed at advancing the development of Nigerian Content
